

AquaTouch

Features

- PLC Water Treatment Controller
- Color Touch Screen Configuration
- Flexible I/O
- Ethernet/Network Communications
- BMS/DCS/SCADA Compatibility
- Compatible with eServiceReport
- Allen Bradley CompactLogix Platform
- Cellular Modem Ready

The H2trOnics AquaTouch PLC-based control system offers expandability and flexibility not typically found in “off the shelf” water treatment control systems. Allen Bradley PLC technology allows H2trOnics to provide a suite of standard water treatment control methods along with the ability to create custom control methods where required. The color touch screen is also a protocol converter which enables the AquaTouch to communicate with almost any plant BMS, DCS, or SCADA system. AquaTouch is also capable of sending data to H2trOnics’ eServiceReport.
