### Make it Yours with Site Customization and Branding

Each site comes with its own unique domain name of your choosing, its own separate database, and private labeling. Unique site artwork includes your company's logo and custom brand name.

### Time is Money

Save time when entering data by using pre-configured comments and previewing previous test results. Tedious tasks like manually compiling customer reviews or emailing reports are now handled by built-in features.

### Performance Comparisons

Color-coded test results make a "green is good, red is bad" concept easy to illustrate with eSR graphing tools. Include graphs when writing your reports to better illustrate technical analysis.

### Focus on Critical Test Results

Included data analysis tools help create a paper trail for all critical test results which fall outside of established control ranges. Setup automatically-created alarms to add another layer of communication and documentation.

### Include Automated Data From Your Equipment

eSR with Flex Reports™ can receive data from compatible communications-enabled devices. Customers with PLCs can also add compatibility. Your customers will appreciate the convenience and analysis benefits of having user-entered and device data in one location.

### Mobile Data Entry with Aliquot® App

Aliquot® is a testing app designed to make the journey from acquiring test data to customer reporting easy and seamless. Aliquot allows for offline data collection and then integrates with eSR software allowing for increased efficiency.
